

From Test to Best: Deliver Virtual Desktop Success - Scalability, Flexibility and ROI

THE VDI PERFORMANCE CHALLENGE

VDI project managers and architects are often surprised by performance issues during and after virtual desktop rollout when everything worked just fine during the (often over-provisioned) pilot. Users start to complain about sluggish applications and want their laptops back. A whopping 50% of all VDI deployments stall or fail because of unacceptable user experience or cost overruns.

When users call and say "my apps are slow", it is often difficult and very time consuming to diagnose and resolve the root cause of the problem. Is it the connection broker? Is it the network? Is it the VMware/Hyper-V virtualization layer? Is it the network or the storage?

SOLUTION: eG ENTERPRISE FOR VDI

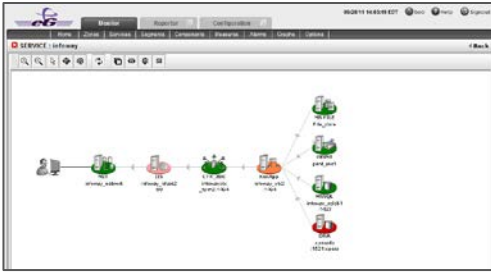

Traditional management tools are designed for yesterday's static, physical environments and they often fail to provide rapid insight into the causes of VDI service issues. Only eG Innovations with its award-winning and patented automated root-cause diagnosis technology is designed to help you tackle today's complex VDI performance management challenges.

eG Enterprise delivers 360-degree service visibility with automated, virtualization-aware root cause diagnosis across every tier and every layer - from desktops to applications, and from the network to storage. eG Enterprise is the only VDI performance management platform that can provide automatic correlation and diagnosis for virtual desktop environments. This unique approach delivers deep, actionable insights into the true causes of VDI service performance issues and enables administrators to pre-emptively detect, diagnose, and fix root-cause issues - before end users notice.

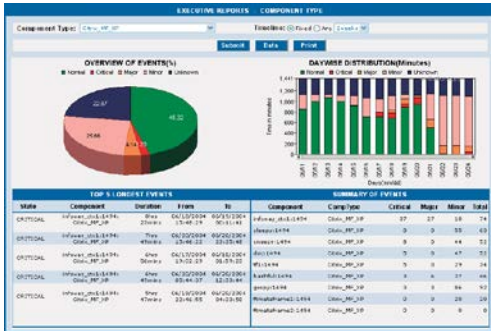

BENEFITS AT A GLANCE

- **Automated VDI Performance Assurance** with built-in performance monitoring and diagnosis
- **Complete, 360-degree performance visibility** across every tier, every layer of your virtual desktop environment
- **Monitor and report on users, not just VMs** to provide deep insights into VDI service performance issues
- **Pre-emptive problem detection & alerting** - before users notice with automatic baselining of normal system behavior
- **Right-Size your desktop infrastructure** with powerful reporting & analytics that ensure maximum ROI

Auto-diagnosis helps you quickly pinpoint the true root cause of performance issues

Deep dive analytics and reporting helps you find bottlenecks and right-size your environment

MONITOR THE VDI SERVICE, NOT SILOS

- Monitor every layer of every tier of the VDI service infrastructure – from network to servers, from the virtualization platform to storage
- Automatically correlate across the tiers to provide actionable insights into the true causes of cross-domain service performance issues, so you can fix problems instead of spending hours investigating them

DEEP INSIGHTS INTO USER ACTIVITY AND EXPERIENCE

- Monitor and report on user sessions, not VMs.
- Analyze activity, usage and latencies for every desktop session to provide insights into the user-perceived performance

RIGHT-SIZE VDI INFRASTRUCTURE FOR GREAT ROI

- Identify bottlenecks, top users, top applications to right-size your environment for maximum ROI
- Understand performance and usage trends of virtualized desktop infrastructures

Risk-Free VDI Performance Assessment

- Actionable insight into performance and ROI bottlenecks
- Learn how to optimize your infrastructure for maximum performance and ROI
- Overcome VDI performance issues and deliver user satisfaction and cost control

Virtualization-Aware Auto Diagnosis

- Virtualization-aware topologies: App to VM, VM to physical machine dependencies
- Automatic correlation and diagnosis across complex virtual & physical environments
- Integrated service performance visibility instead of silo view

ABOUT eG INNOVATIONS

eG Innovations provides intelligent performance management solutions that automate and dramatically accelerate the discovery, diagnosis, and resolution of service performance issues in virtual, cloud, and physical service infrastructures. Managing some of the largest VDI deployments in the world, only eG Innovations offers 360-degree service visibility with virtualization-aware performance correlation across every layer and every tier - from desktops to applications, and from network to storage. This unique approach delivers deep, actionable insights into the true causes of cross-domain service performance issues and enables administrators to pre-emptively detect, diagnose, and fix root-cause issues - before end users notice.
